# Major Changes to Respirable Dust Sampling Program

### **Health Hazard Information Card HH-48**

## **Immediate Changes**

- Sample portal to portal for full shift regardless of shift length
- Control filter required for CMDPSU samples
- Establish Excessive Concentration Values (ECV)
- Certified sampler that made on-shift checks must sign dust data card
- Part 90 includes surface miners
- Medical monitoring applies to surface and underground miners
- Noncompliance on MSHA samples will be based on a single full shift measurement
- Shifts longer than 12 hours, certified sampler will switch CMDPSU with a fully charged pump prior to the 13th hour
- Mine ventilation plan content:
  - minimum quantity of air for each MMU
  - specific details of dust controls for each MMU
  - specific type, size and maintenance of scrubber screen
  - ✓ maintenance of dust collectors
- 75.362(a)(2) exams are recorded in a secure book or electronically, verified by certified person, and countersigned by Mine Foreman
- Operators required to record shift length for each production shift on each MMU
- Noncompliance based on 2 of 5 required samples meeting or exceeding the ECV

- Operators required to record production for each shift on each MMU
- Required air measurements at the end of the line curtain with the scrubber turned off
- Begin sampling DWPs and Part 90 miners on a quarterly basis
- Production on shift sampled is 80% of last 30 production shifts
- Establish 0.1mg/m³ (100μg/m³) quartz standard
- DWPs include highwall drill and bulldozer operators

### After 18 months

- CPDM sampling for DOs and Part 90
- Establish ODOs on MMUs
- Sample at least 15 consecutive normal production shifts for DOs and ODOs
- Noncompliance on operator collected samples will be based on 3 of 15 required samples meeting or exceeding the ECV
- The District Manager may require additional sets of 15 samples on DOs if he believes the ventilation plan is not being followed
- Shifts longer than 12 hours, certified sampler will switch CPDM with a fully charged unit prior to the 13th hour

#### After 24 months

The dust standard is reduced to 1.5mg/ m³ (0.5mg/m³ on intake air and Part 90 miners)

If you have questions about any occupational health matter, please contact your local MSHA office or MSHA's national office at (202) 693-9500.
